# Introduction

The Account API provides standardized mechanism for the management of billing and settlement accounts, as well as for financial accounting (account receivable) contexts.

It allows creation, update and retrieval of account information for common business models such as B2C, B2B2C (creation of mass market customer billing account within a “Billing on Behalf of” process for example), or B2B (creation of a billing/settlement account for a partner or B2B customer).

It also allows creation and query of bill items allowing partners or customers to check their invoice.

Accounts typically refer to parties and party roles. However the management of party and party roles is out of the scope of this API. The TMF APIs Party Management, Customer Management and Party Role Management are used for this purpose.

# Sample Use Cases

Reader will find example of use cases using Usage API in “Open Digital Architecture Business Scenarios and Use Cases” document IG1228.

# Support of polymorphism and extension patterns

Support of polymorphic collections and types and schema based extension is provided by means of a list of generic meta-attributes that we describe below. Polymorphism in collections occurs when entities inherit from base entities, for instance a `BillingAccount` and `SettlementAccount` inheriting properties from the abstract `Account` entity.

Generic support of polymorphism and pattern extensions is described in the TMF API Guidelines v3.0 Part 2 document.

The `@type` attribute provides a way to represent the actual class type of an entity. For example, within a list of `Account` instances some may be instances of `BillingAccount` where other could be instances of `SettlementAccount`. The `@type` gives this information. All resources and sub-resources of this API have a `@type` attributes that can be provided when this is useful.

The `@referredType` can be used within reference entities (like for instance an `AccountRef` object) to explicitly denote the actual entity type of the referred class. Notice that in reference entities the `@type`, when used, denotes the class type of the reference itself, such as `BillingAccountRef` or `SettlementAccountRef`, and not the class type of the referred object. However since reference classes are rarely sub-classed, `@type` is generally not useful in reference objects.

The `@schemaLocation` property can be used in resources to allow specifying user-defined properties of an Entity or to specify the expected *characteristics* of an entity.

The `@baseType` attribute gives a way to provide explicitly the base of class of a given resource that has been extended.

# RESOURCE MODEL

## Managed Entity and Task Resource Models

### BillFormat resource

A detailed description of the way in which a bill is presented.

#### Resource model

BillFormat
<code>description : String</code> <code>href : String</code> <code>id : String</code> <code>name : String</code> <code>topicRef : String</code> <code>@baseType : String</code> <code>@schemaLocation : String</code> <code>@type = BillFormat</code>

(1) : Mandatory property

Figure 1 - BillFormat

### Field descriptions

#### BillFormat fields

description	A String. An explanatory text for this bill format.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Json representation sample(s)

We provide below a JSON representation as example of the 'BillFormat' resource object.

```
{
```

```
"@type" : "BillFormat",
"description" : "This bill format describes a fancy layout for our youth
submarket",
"href" : "https://host:port/tmf-api/accountManagement/v5/billFormat/8718",
"id" : "8718",
"name" : "Detailed invoice for youth market",
"topicRef" :
"kafka://host/{prefix}.accountManagement.v5.retrieveBillFormat.commandRequest"
}
```

## PartyAccount resource

Account used for billing or for settlement purposes concerning a given party (an organization or an individual). It is a specialization of entity Account.

### Resource model

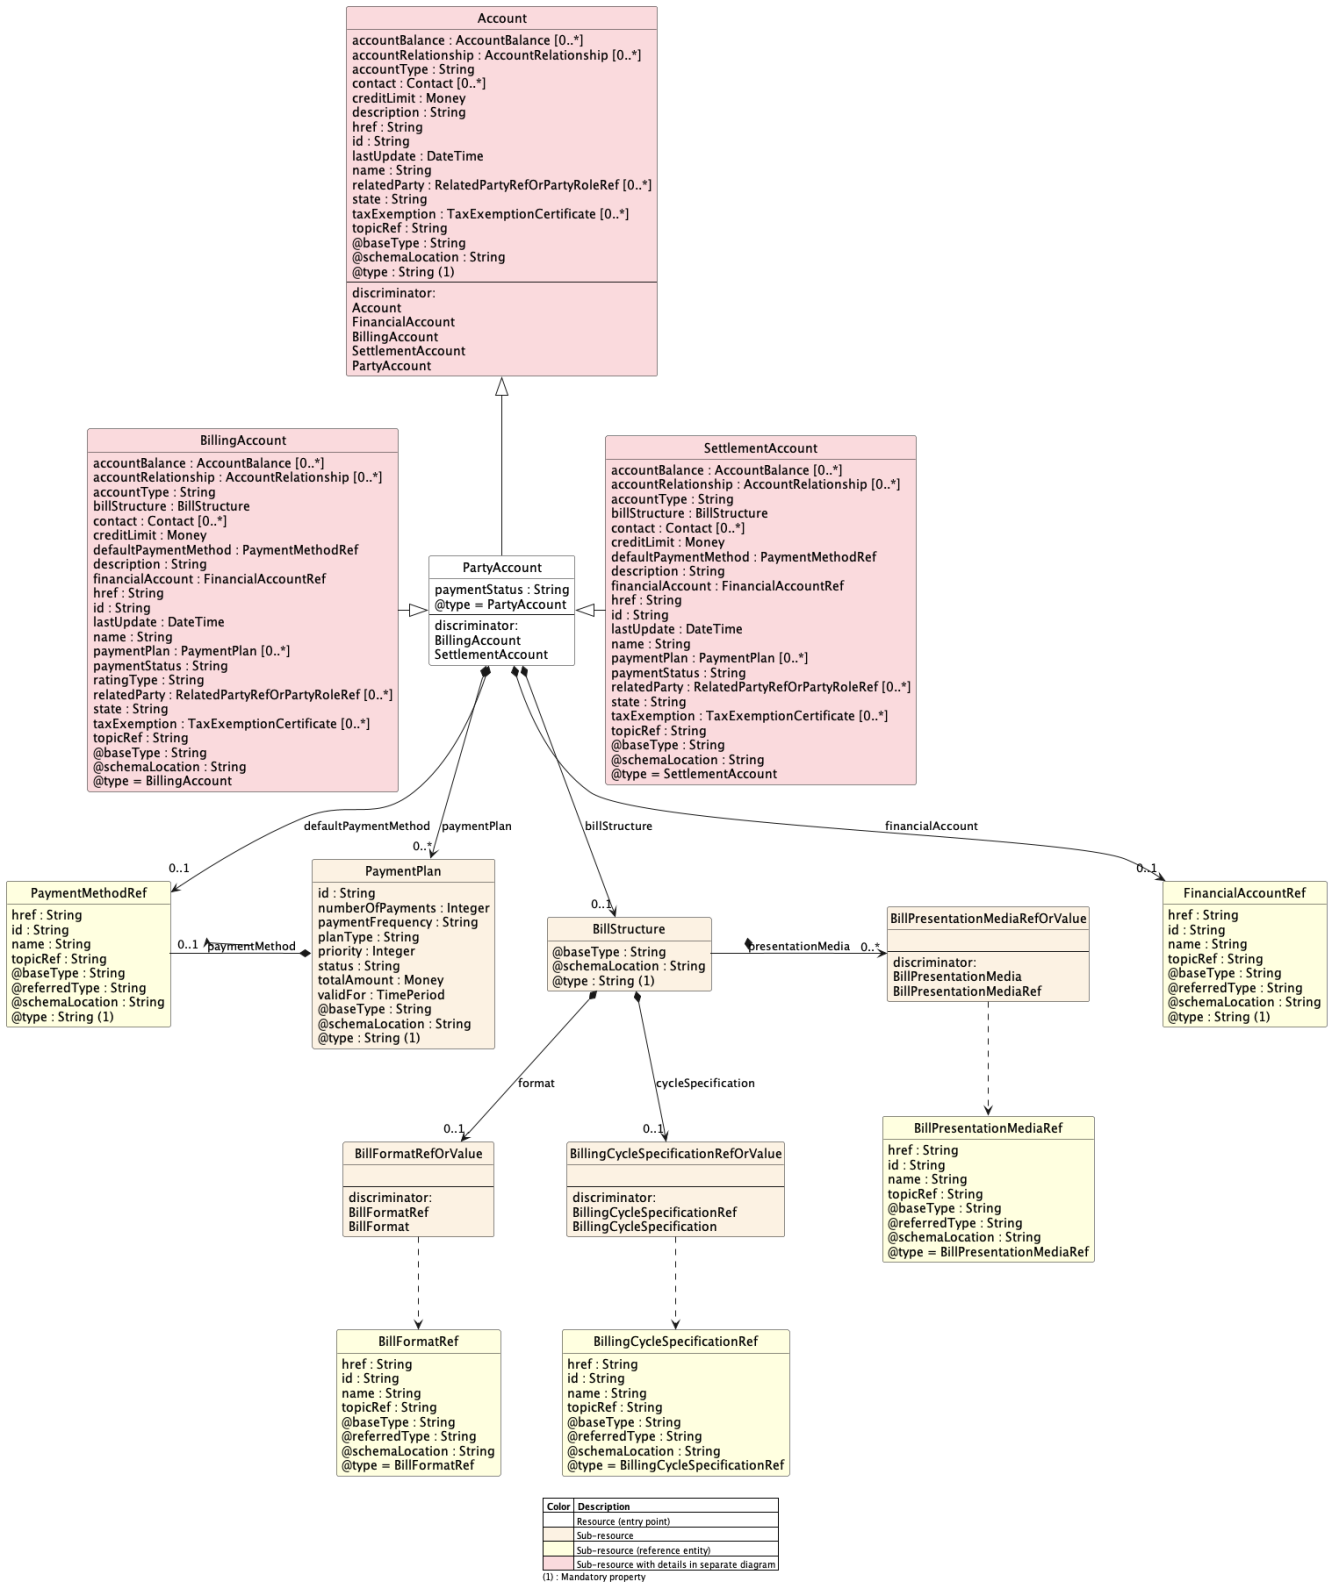

Figure 2 - PartyAccount

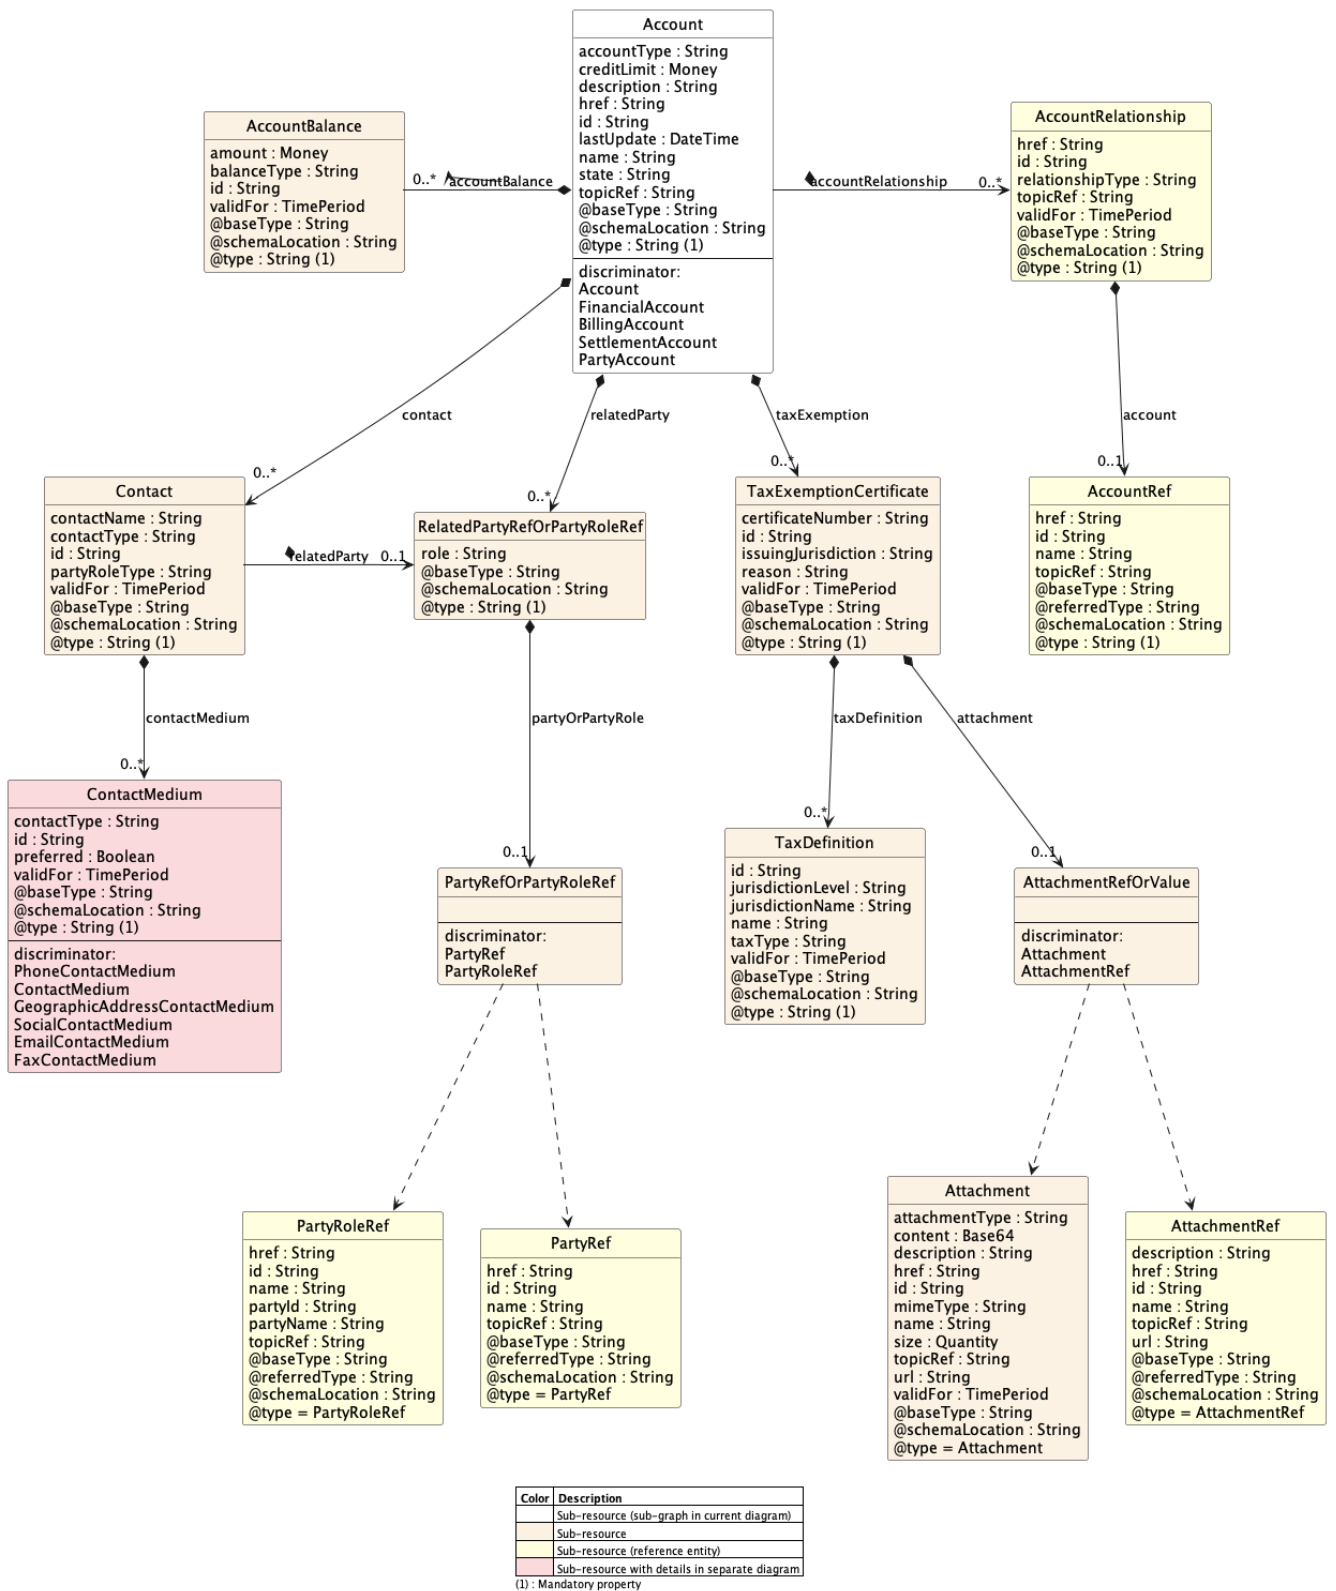

Figure 3 - Account

## Field descriptions

### PartyAccount fields

billStructure	A BillStructure. The structure of the bill for party accounts (billing or settlement).
---------------	--

defaultPaymentMethod	A PaymentMethodRef. PaymentMethod reference. A payment method defines a specific mean of payment (e.g direct debit).
financialAccount	A FinancialAccountRef. AccountReceivable reference. An account of money owed by a party to another entity in exchange for goods or services that have been delivered or used. An account receivable aggregates the amounts of one or more party accounts (billing or settlement) owned by a given party.
paymentPlan	A PaymentPlan. Defines a plan for payment (when a party wants to spread his payments).
paymentStatus	A String. The condition of the account, such as due, paid, in arrears.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Account sub-resource fields

accountBalance	An AccountBalance. Balances linked to the account.
accountRelationship	An AccountRelationship. Significant connection between accounts. For instance an aggregating account for a list of shop branches each having its own billing account.
accountType	A String. A categorization of an account, such as individual, joint, and so forth, whose instances share some of the same characteristics. Note: for flexibility we use a String here but an implementation may use an enumeration with a limited list of valid values.
contact	A Contact. An individual or an organization used as a contact point for a given account and accessed via some contact medium.
creditLimit	A Money. A base / value business entity used to represent money.
description	A String. Detailed description of the account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. The date and time that the account was last updated.
name	A String. Name of the account.
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
state	A String. Contains the lifecycle state such as: Active, Closed, Suspended and so on.

taxExemption	A TaxExemptionCertificate. A tax exemption certificate represents a tax exemption granted to a party (individual or organization) by a tax jurisdiction which may be a city, state, country,... An exemption has a certificate identifier (received from the jurisdiction that levied the tax) and a validity period. An exemption is per tax types and determines for each type of tax what portion of the tax is exempted (partial by percentage or complete) via the tax definition.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AccountBalance sub-resource fields

amount	A Money. A base / value business entity used to represent money.
balanceType	A String. Type of the balance : deposit balance, disputed balance, loyalty balance, receivable balance...
id	A String. Identifier of the balance within list of the balances (for entities with list).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AccountRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AccountRelationship sub-resource fields

account	An AccountRef. Account reference. A account may be a party account or a financial account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
relationshipType	A String. Type of relationship.
topicRef	A String. A reference to the topic from which this entity can be fetched.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Attachment sub-resource fields

attachmentType	A String. A business characterization of the purpose of the attachment, for example logo, instructionManual, contractCopy.
content	A Base64. The actual contents of the attachment object, if embedded, encoded as base64.
description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
contentType	A String. A technical characterization of the attachment content format using IETF Mime Types.
name	A String. The name of the attachment.
size	A Quantity. An amount in a given unit.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Uniform Resource Locator, is a web page address (a subset of URI).

validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AttachmentRef sub-resource fields

description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Link to the attachment media/content.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### BillFormat sub-resource fields

description	A String. An explanatory text for this bill format.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillFormatRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillPresentationMedia sub-resource fields

description	A String. An explanatory text describing this bill presentation media.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillPresentationMediaRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillStructure sub-resource fields

cycleSpecification	A BillingCycleSpecificationRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillingCycleSpecification entity and not the BillingCycleSpecificationRefOrValue class itself.
format	A BillFormatRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillFormat entity and not the BillFormatRefOrValue class itself.
presentationMedia	A BillPresentationMediaRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillPresentationMedia entity and not the BillPresentationMediaRefOrValue class itself.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillingAccount sub-resource fields

ratingType	A String. Indicates whether the account follows a specific payment option such as prepaid or postpaid.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillingCycleSpecification sub-resource fields

billingDateShift	An Integer. An offset of a billing/settlement date. The offset is expressed as number of days with regard to the start of the billing/settlement period.
billingPeriod	A String. A billing time period. It can be recurring, for example: week, month, quarter of year, year .
chargeDateOffset	An Integer. An offset of a date through which charges previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.

creditDateOffset	An Integer. An offset of a date through which credits previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.
description	A String. An explanation regarding this billing cycle specification.
frequency	A String. Frequency of the billing cycle (monthly for instance).
href	A String. Hyperlink reference.
id	A String. Unique identifier.
mailingDateOffset	An Integer. An offset of a customer bill mailing date. The offset is expressed as number of days with regard to the start of the BillingPeriod.
name	A String. A short descriptive name.
paymentDueDateOffset	An Integer. An offset of a payment due date. The offset is expressed as number of days with regard to the start of the BillingPeriod.
topicRef	A String. A reference to the topic from which this entity can be fetched.
validFor	A TimePeriod. A period of time, either as a deadline (endTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **BillingCycleSpecificationRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

## Contact sub-resource fields

contactMedium	A ContactMedium. Indicates the contact medium that could be used to contact the party. This is an abstract base class, the actual value is in one of the strongly-typed subclasses : EmailContactMedium, FaxContactMedium, PhoneContactMedium, GeographicAddressContactMedium, SocialMediaContactMedium...
contactName	A String. A displayable name for that contact.
contactType	A String. Type of contact (primary, secondary...).
id	A String. Identifier of the contact within list of the contacts (for entities with list).
partyRoleType	A String. Identifies what kind of party role type is linked to the contact (a account manager...).
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

## ContactMedium sub-resource fields

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

## EmailContactMedium sub-resource fields

emailAddress	A String. Full email address in standard format.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **FaxContactMedium sub-resource fields**

faxNumber	A String. The fax number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **FinancialAccountRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **GeographicAddressContactMedium sub-resource fields**

city	A String. The city.
country	A String. The country.
geographicAddress	A GeographicAddressRef. Reference to a Geographic Address.
postCode	A String. Postcode.
stateOrProvince	A String. State or province.
street1	A String. Describes the street.
street2	A String. Complementary street description.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **GeographicAddressRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.

name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRoleRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
partyId	A String. The identifier of the engaged party that is linked to the PartyRole object.
partyName	A String. The name of the engaged party that is linked to the PartyRole object.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **PaymentMethodRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **PaymentPlan sub-resource fields**

id	A String. Identifier of the plan within list of the plans (for entities with list).
numberOfPayments	An Integer. Number of payments used to spread the global payment.
paymentFrequency	A String. Frequency of the payments, such as monthly and bimonthly.
paymentMethod	A PaymentMethodRef. PaymentMethod reference. A payment method defines a specific mean of payment (e.g direct debit).
planType	A String. Type of payment plan.
priority	An Integer. Priority of the payment plan.
status	A String. Status of the payment plan (effective, ineffective).
totalAmount	A Money. A base / value business entity used to represent money.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.

@type	A String. When sub-classing, this defines the sub-class Extensible name.
-------	--

#### PhoneContactMedium sub-resource fields

phoneNumber	A String. The phone number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### RelatedPartyRefOrPartyRoleRef sub-resource fields

partyOrPartyRole	A PartyRefOrPartyRoleRef.
role	A String. Role played by the related party or party role in the context of the specific entity it is linked to. Such as 'initiator', 'customer', 'salesAgent', 'user'.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### SettlementAccount sub-resource fields

@type	A String. When sub-classing, this defines the sub-class Extensible name.
-------	--

#### SocialContactMedium sub-resource fields

socialNetworkId	A String. Identifier as a member of a social network.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### TaxDefinition sub-resource fields

id	A String. Unique identifier of the tax.
jurisdictionLevel	A String. Level of the jurisdiction that levies the tax.
jurisdictionName	A String. Name of the jurisdiction that levies the tax.
name	A String. Tax name.
taxType	A String. Type of the tax.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### TaxExemptionCertificate sub-resource fields

attachment	An AttachmentRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the Attachment entity and not the AttachmentRefOrValue class itself.
certificateNumber	A String. Identifier of a document that shows proof of exemption from taxes for the taxing jurisdiction.
id	A String. Identifier of the tax exemption within list of the exemptions.
issuingJurisdiction	A String. Name of the jurisdiction that issued the exemption.
reason	A String. Reason for the tax exemption.
taxDefinition	A TaxDefinition. Reference of a tax definition. A tax is levied by an authorized tax jurisdiction. For example, there are many different types of tax (Federal Tax levied by the US Government, State Tax levied by the State of California, City Tax levied by the City of Los Angeles, etc.).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Json representation sample(s)

We provide below a JSON representation as example of the 'PartyAccount' resource object.

```
{
  "@type" : "PartyAccount",
  "creditLimit" : {

## BillingAccount resource

A party account used for billing purposes. It includes a description of the bill structure (frequency, presentation media, format and so on). It is a specialization of entity PartyAccount.

### Resource model

Color	Description
	Resource (entry point)
	Sub-resource with details in separate diagram

(1) : Mandatory property

Figure 4 - BillingAccount

## Field descriptions

### BillingAccount fields

ratingType

A String. Indicates whether the account follows a specific payment option such as prepaid or postpaid.

@type	A String. When sub-classing, this defines the sub-class Extensible name.
-------	--

### Account sub-resource fields

accountBalance	An AccountBalance. Balances linked to the account.
accountRelationship	An AccountRelationship. Significant connection between accounts. For instance an aggregating account for a list of shop branches each having its own billing account.
accountType	A String. A categorization of an account, such as individual, joint, and so forth, whose instances share some of the same characteristics. Note: for flexibility we use a String here but an implementation may use an enumeration with a limited list of valid values.
contact	A Contact. An individual or an organization used as a contact point for a given account and accessed via some contact medium.
creditLimit	A Money. A base / value business entity used to represent money.
description	A String. Detailed description of the account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. The date and time that the account was last updated.
name	A String. Name of the account.
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
state	A String. Contains the lifecycle state such as: Active, Closed, Suspended and so on.
taxExemption	A TaxExemptionCertificate. A tax exemption certificate represents a tax exemption granted to a party (individual or organization) by a tax jurisdiction which may be a city, state, country,... An exemption has a certificate identifier (received from the jurisdiction that levied the tax) and a validity period. An exemption is per tax types and determines for each type of tax what portion of the tax is exempted (partial by percentage or complete) via the tax definition.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AccountBalance sub-resource fields

amount	A Money. A base / value business entity used to represent money.
balanceType	A String. Type of the balance : deposit balance, disputed balance, loyalty balance, receivable balance...
id	A String. Identifier of the balance within list of the balances (for entities with list).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AccountRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AccountRelationship sub-resource fields

account	An AccountRef. Account reference. A account may be a party account or a financial account.
href	A String. Hyperlink reference.

id	A String. Unique identifier.
relationshipType	A String. Type of relationship.
topicRef	A String. A reference to the topic from which this entity can be fetched.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Attachment sub-resource fields

attachmentType	A String. A business characterization of the purpose of the attachment, for example logo, instructionManual, contractCopy.
content	A Base64. The actual contents of the attachment object, if embedded, encoded as base64.
description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
contentType	A String. A technical characterization of the attachment content format using IETF Mime Types.
name	A String. The name of the attachment.
size	A Quantity. An amount in a given unit.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Uniform Resource Locator, is a web page address (a subset of URI).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AttachmentRef sub-resource fields

description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Link to the attachment media/content.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **BillFormat sub-resource fields**

description	A String. An explanatory text for this bill format.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **BillFormatRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.

@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **BillPresentationMedia sub-resource fields**

description	A String. An explanatory text describing this bill presentation media.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **BillPresentationMediaRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **BillStructure sub-resource fields**

cycleSpecification	A BillingCycleSpecificationRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillingCycleSpecification entity and not the BillingCycleSpecificationRefOrValue class itself.
format	A BillFormatRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillFormat entity and not the BillFormatRefOrValue class itself.
presentationMedia	A BillPresentationMediaRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillPresentationMedia entity and not the BillPresentationMediaRefOrValue class itself.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillingCycleSpecification sub-resource fields

billingDateShift	An Integer. An offset of a billing/settlement date. The offset is expressed as number of days with regard to the start of the billing/settlement period.
billingPeriod	A String. A billing time period. It can be recurring, for example: week, month, quarter of year, year .
chargeDateOffset	An Integer. An offset of a date through which charges previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.
creditDateOffset	An Integer. An offset of a date through which credits previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.
description	A String. An explanation regarding this billing cycle specification.
frequency	A String. Frequency of the billing cycle (monthly for instance).
href	A String. Hyperlink reference.
id	A String. Unique identifier.
mailingDateOffset	An Integer. An offset of a customer bill mailing date. The offset is expressed as number of days with regard to the start of the BillingPeriod.
name	A String. A short descriptive name.

paymentDueDateOffset	An Integer. An offset of a payment due date. The offset is expressed as number of days with regard to the start of the BillingPeriod.
topicRef	A String. A reference to the topic from which this entity can be fetched.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **BillingCycleSpecificationRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **Contact sub-resource fields**

contactMedium	A ContactMedium. Indicates the contact medium that could be used to contact the party. This is an abstract base class, the actual value is in one of the strongly-typed subclasses : EmailContactMedium, FaxContactMedium, PhoneContactMedium, GeographicAddressContactMedium, SocialMediaContactMedium...
contactName	A String. A displayable name for that contact.
contactType	A String. Type of contact (primary, secondary...).
id	A String. Identifier of the contact within list of the contacts (for entities with list).

partyRoleType	A String. Identifies what kind of party role type is linked to the contact (a account manager...).
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### ContactMedium sub-resource fields

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### EmailContactMedium sub-resource fields

emailAddress	A String. Full email address in standard format.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### FaxContactMedium sub-resource fields

faxNumber	A String. The fax number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### FinancialAccountRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **GeographicAddressContactMedium sub-resource fields**

city	A String. The city.
country	A String. The country.
geographicAddress	A GeographicAddressRef. Reference to a Geographic Address.
postCode	A String. Postcode.
stateOrProvince	A String. State or province.
street1	A String. Describes the street.
street2	A String. Complementary street description.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **GeographicAddressRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyAccount sub-resource fields

billStructure	A BillStructure. The structure of the bill for party accounts (billing or settlement).
defaultPaymentMethod	A PaymentMethodRef. PaymentMethod reference. A payment method defines a specific mean of payment (e.g direct debit).
financialAccount	A FinancialAccountRef. AccountReceivable reference. An account of money owed by a party to another entity in exchange for goods or services that have been delivered or used. An account receivable aggregates the amounts of one or more party accounts (billing or settlement) owned by a given party.
paymentPlan	A PaymentPlan. Defines a plan for payment (when a party wants to spread his payments).
paymentStatus	A String. The condition of the account, such as due, paid, in arrears.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRoleRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
partyId	A String. The identifier of the engaged party that is linked to the PartyRole object.

partyName	A String. The name of the engaged party that is linked to the PartyRole object.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PaymentMethodRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PaymentPlan sub-resource fields

id	A String. Identifier of the plan within list of the plans (for entities with list).
numberOfPayments	An Integer. Number of payments used to spread the global payment.
paymentFrequency	A String. Frequency of the payments, such as monthly and bimonthly.
paymentMethod	A PaymentMethodRef. PaymentMethod reference. A payment method defines a specific mean of payment (e.g direct debit).
planType	A String. Type of payment plan.
priority	An Integer. Priority of the payment plan.
status	A String. Status of the payment plan (effective, ineffective).

totalAmount	A Money. A base / value business entity used to represent money.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### PhoneContactMedium sub-resource fields

phoneNumber	A String. The phone number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### RelatedPartyRefOrPartyRoleRef sub-resource fields

partyOrPartyRole	A PartyRefOrPartyRoleRef.
role	A String. Role played by the related party or party role in the context of the specific entity it is linked to. Such as 'initiator', 'customer', 'salesAgent', 'user'.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### SocialContactMedium sub-resource fields

socialNetworkId	A String. Identifier as a member of a social network.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### TaxDefinition sub-resource fields

id	A String. Unique identifier of the tax.
jurisdictionLevel	A String. Level of the jurisdiction that levies the tax.
jurisdictionName	A String. Name of the jurisdiction that levies the tax.
name	A String. Tax name.
taxType	A String. Type of the tax.

validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### TaxExemptionCertificate sub-resource fields

attachment	An AttachmentRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the Attachment entity and not the AttachmentRefOrValue class itself.
certificateNumber	A String. Identifier of a document that shows proof of exemption from taxes for the taxing jurisdiction.
id	A String. Identifier of the tax exemption within list of the exemptions.
issuingJurisdiction	A String. Name of the jurisdiction that issued the exemption.
reason	A String. Reason for the tax exemption.
taxDefinition	A TaxDefinition. Reference of a tax definition. A tax is levied by an authorized tax jurisdiction. For example, there are many different types of tax (Federal Tax levied by the US Government, State Tax levied by the State of California, City Tax levied by the City of Los Angeles, etc.).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Json representation sample(s)

We provide below a JSON representation as example of the 'BillingAccount' resource object.

```
{
  "@type" : "BillingAccount",
  "paymentStatus" : "In Arrears",
  "creditLimit" : {
    "unit" : "USD",
    "value" : 10000
  }
}
```

```

},

## FinancialAccount resource

An account of money owed by a party to another entity in exchange for goods or services that have been delivered or used. A financial (account receivable account/account payable) aggregates the amounts of one or more party accounts (billing or settlement) owned by a given party. It is a specialization of entity Account.

### Resource model

Color	Description
	Resource (entry point)
	Sub-resource with details in separate diagram

(1) : Mandatory property

Figure 7 - FinancialAccount

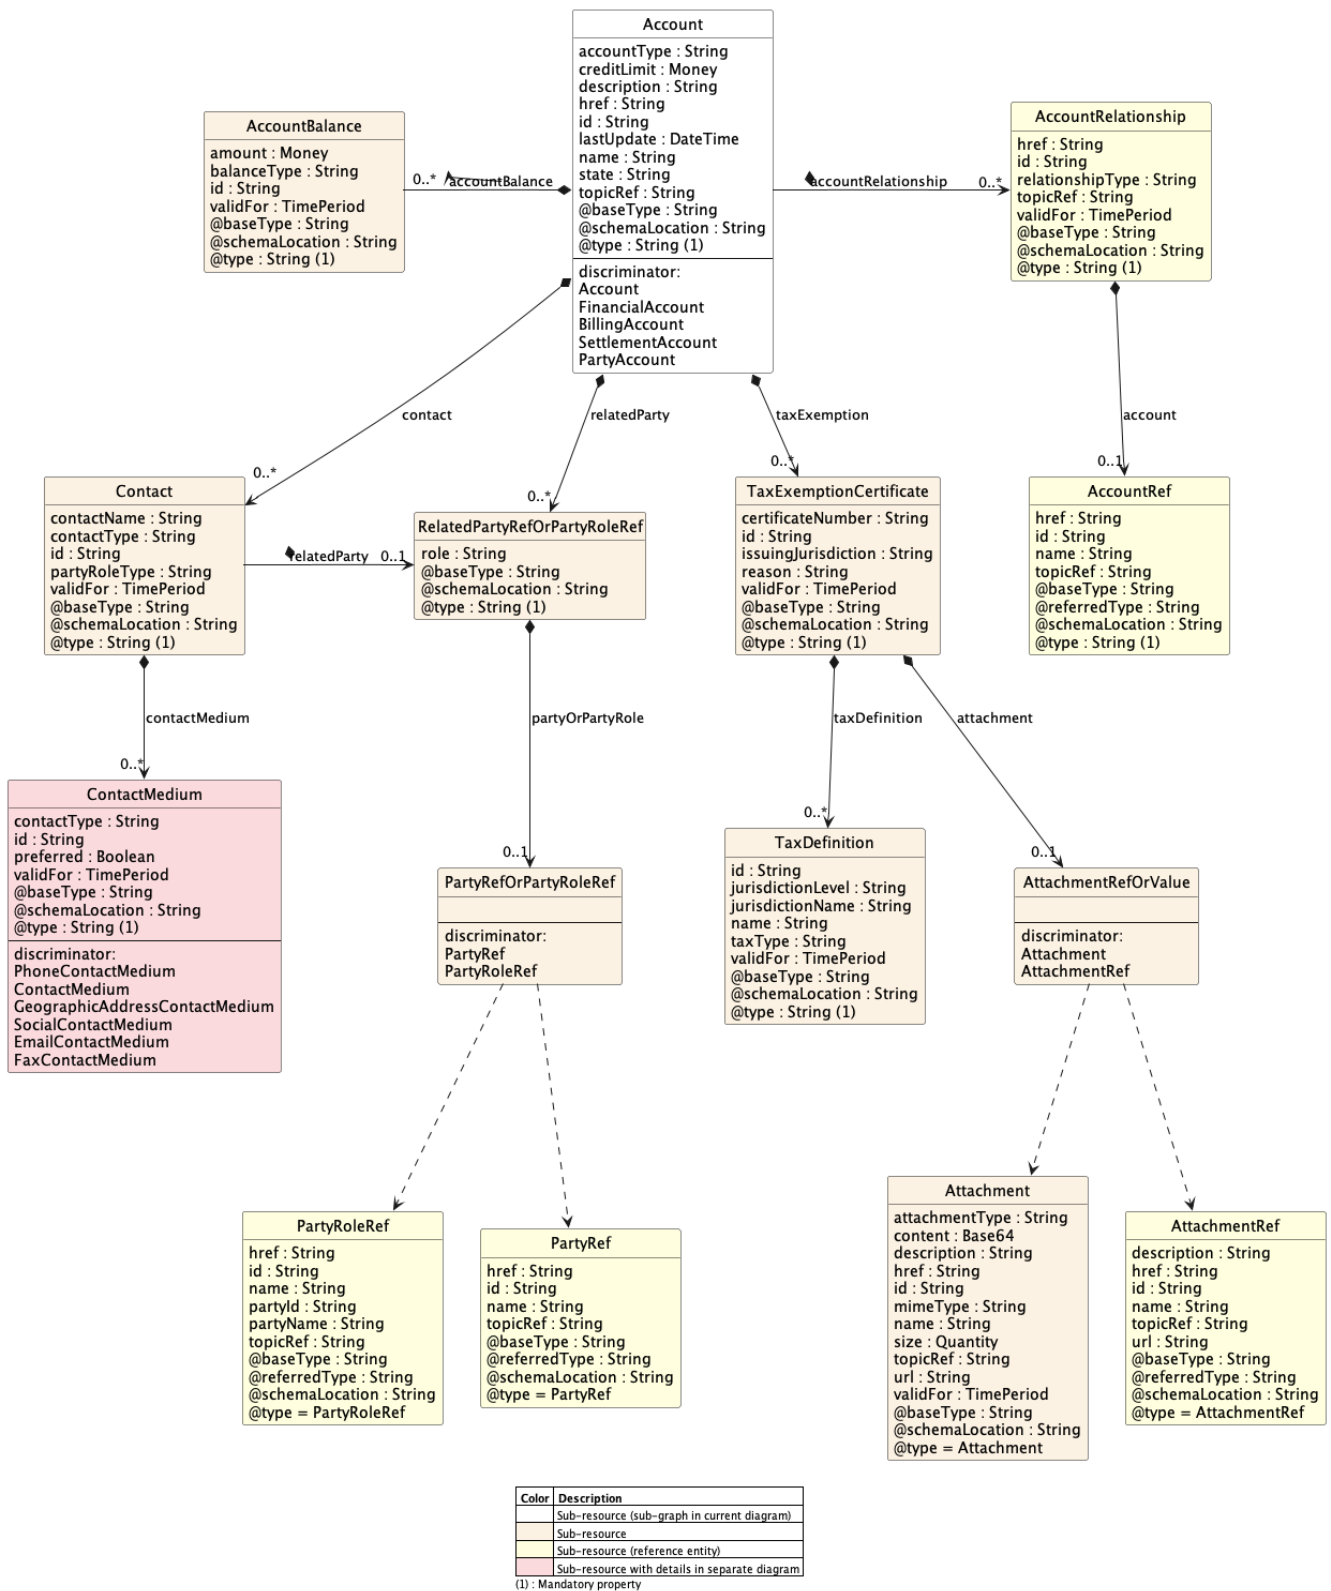

Figure 8 - Account

## Field descriptions

### FinancialAccount fields

@type	A String. When sub-classing, this defines the sub-class Extensible name.
-------	--

### Account sub-resource fields

accountBalance	An AccountBalance. Balances linked to the account.
accountRelationship	An AccountRelationship. Significant connection between accounts. For instance an aggregating account for a list of shop branches each having its own billing account.
accountType	A String. A categorization of an account, such as individual, joint, and so forth, whose instances share some of the same characteristics. Note: for flexibility we use a String here but an implementation may use an enumeration with a limited list of valid values.
contact	A Contact. An individual or an organization used as a contact point for a given account and accessed via some contact medium.
creditLimit	A Money. A base / value business entity used to represent money.
description	A String. Detailed description of the account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. The date and time that the account was last updated.
name	A String. Name of the account.
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
state	A String. Contains the lifecycle state such as: Active, Closed, Suspended and so on.
taxExemption	A TaxExemptionCertificate. A tax exemption certificate represents a tax exemption granted to a party (individual or organization) by a tax jurisdiction which may be a city, state, country,... An exemption has a certificate identifier (received from the jurisdiction that levied the tax) and a validity period. An exemption is per tax types and determines for each type of tax what portion of the tax is exempted (partial by percentage or complete) via the tax definition.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AccountBalance sub-resource fields

amount	A Money. A base / value business entity used to represent money.
balanceType	A String. Type of the balance : deposit balance, disputed balance, loyalty balance, receivable balance...
id	A String. Identifier of the balance within list of the balances (for entities with list).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AccountRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AccountRelationship sub-resource fields

account	An AccountRef. Account reference. A account may be a party account or a financial account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
relationshipType	A String. Type of relationship.
topicRef	A String. A reference to the topic from which this entity can be fetched.

validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### Attachment sub-resource fields

attachmentType	A String. A business characterization of the purpose of the attachment, for example logo, instructionManual, contractCopy.
content	A Base64. The actual contents of the attachment object, if embedded, encoded as base64.
description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
contentType	A String. A technical characterization of the attachment content format using IETF Mime Types.
name	A String. The name of the attachment.
size	A Quantity. An amount in a given unit.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Uniform Resource Locator, is a web page address (a subset of URI).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AttachmentRef sub-resource fields

description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.

name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Link to the attachment media/content.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Contact sub-resource fields

contactMedium	A ContactMedium. Indicates the contact medium that could be used to contact the party. This is an abstract base class, the actual value is in one of the strongly-typed subclasses : EmailContactMedium, FaxContactMedium, PhoneContactMedium, GeographicAddressContactMedium, SocialMediaContactMedium...
contactName	A String. A displayable name for that contact.
contactType	A String. Type of contact (primary, secondary...).
id	A String. Identifier of the contact within list of the contacts (for entities with list).
partyRoleType	A String. Identifies what kind of party role type is linked to the contact (a account manager...).
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### ContactMedium sub-resource fields

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
-------------	---

id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **EmailContactMedium sub-resource fields**

emailAddress	A String. Full email address in standard format.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **FaxContactMedium sub-resource fields**

faxNumber	A String. The fax number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **GeographicAddressContactMedium sub-resource fields**

city	A String. The city.
country	A String. The country.
geographicAddress	A GeographicAddressRef. Reference to a Geographic Address.
postCode	A String. Postcode.
stateOrProvince	A String. State or province.
street1	A String. Describes the street.
street2	A String. Complementary street description.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **GeographicAddressRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.

topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRoleRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
partyId	A String. The identifier of the engaged party that is linked to the PartyRole object.
partyName	A String. The name of the engaged party that is linked to the PartyRole object.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### PhoneContactMedium sub-resource fields

phoneNumber	A String. The phone number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### RelatedPartyRefOrPartyRoleRef sub-resource fields

partyOrPartyRole	A PartyRefOrPartyRoleRef.
role	A String. Role played by the related party or party role in the context of the specific entity it is linked to. Such as 'initiator', 'customer', 'salesAgent', 'user'.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### SocialContactMedium sub-resource fields

socialNetworkId	A String. Identifier as a member of a social network.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### TaxDefinition sub-resource fields

id	A String. Unique identifier of the tax.
jurisdictionLevel	A String. Level of the jurisdiction that levies the tax.
jurisdictionName	A String. Name of the jurisdiction that levies the tax.
name	A String. Tax name.
taxType	A String. Type of the tax.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.

@type	A String. When sub-classing, this defines the sub-class Extensible name.
-------	--

### TaxExemptionCertificate sub-resource fields

attachment	An AttachmentRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the Attachment entity and not the AttachmentRefOrValue class itself.
certificateNumber	A String. Identifier of a document that shows proof of exemption from taxes for the taxing jurisdiction.
id	A String. Identifier of the tax exemption within list of the exemptions.
issuingJurisdiction	A String. Name of the jurisdiction that issued the exemption.
reason	A String. Reason for the tax exemption.
taxDefinition	A TaxDefinition. Reference of a tax definition. A tax is levied by an authorized tax jurisdiction. For example, there are many different types of tax (Federal Tax levied by the US Government, State Tax levied by the State of California, City Tax levied by the City of Los Angeles, etc.).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Json representation sample(s)

We provide below a JSON representation as example of the 'FinancialAccount' resource object.

```
{
  "@type" : "FinancialAccount",
  "creditLimit" : {
    "unit" : "USD",
    "value" : 3500
  },

## SettlementAccount resource

A party account used for settlement purposes. It includes a description of the bill structure (frequency, presentation media, format and so on). It is a specialization of entity PartyAccount.

### Resource model

Color	Description
	Resource (entry point)
	Sub-resource with details in separate diagram

(1) : Mandatory property

Figure 9 - SettlementAccount

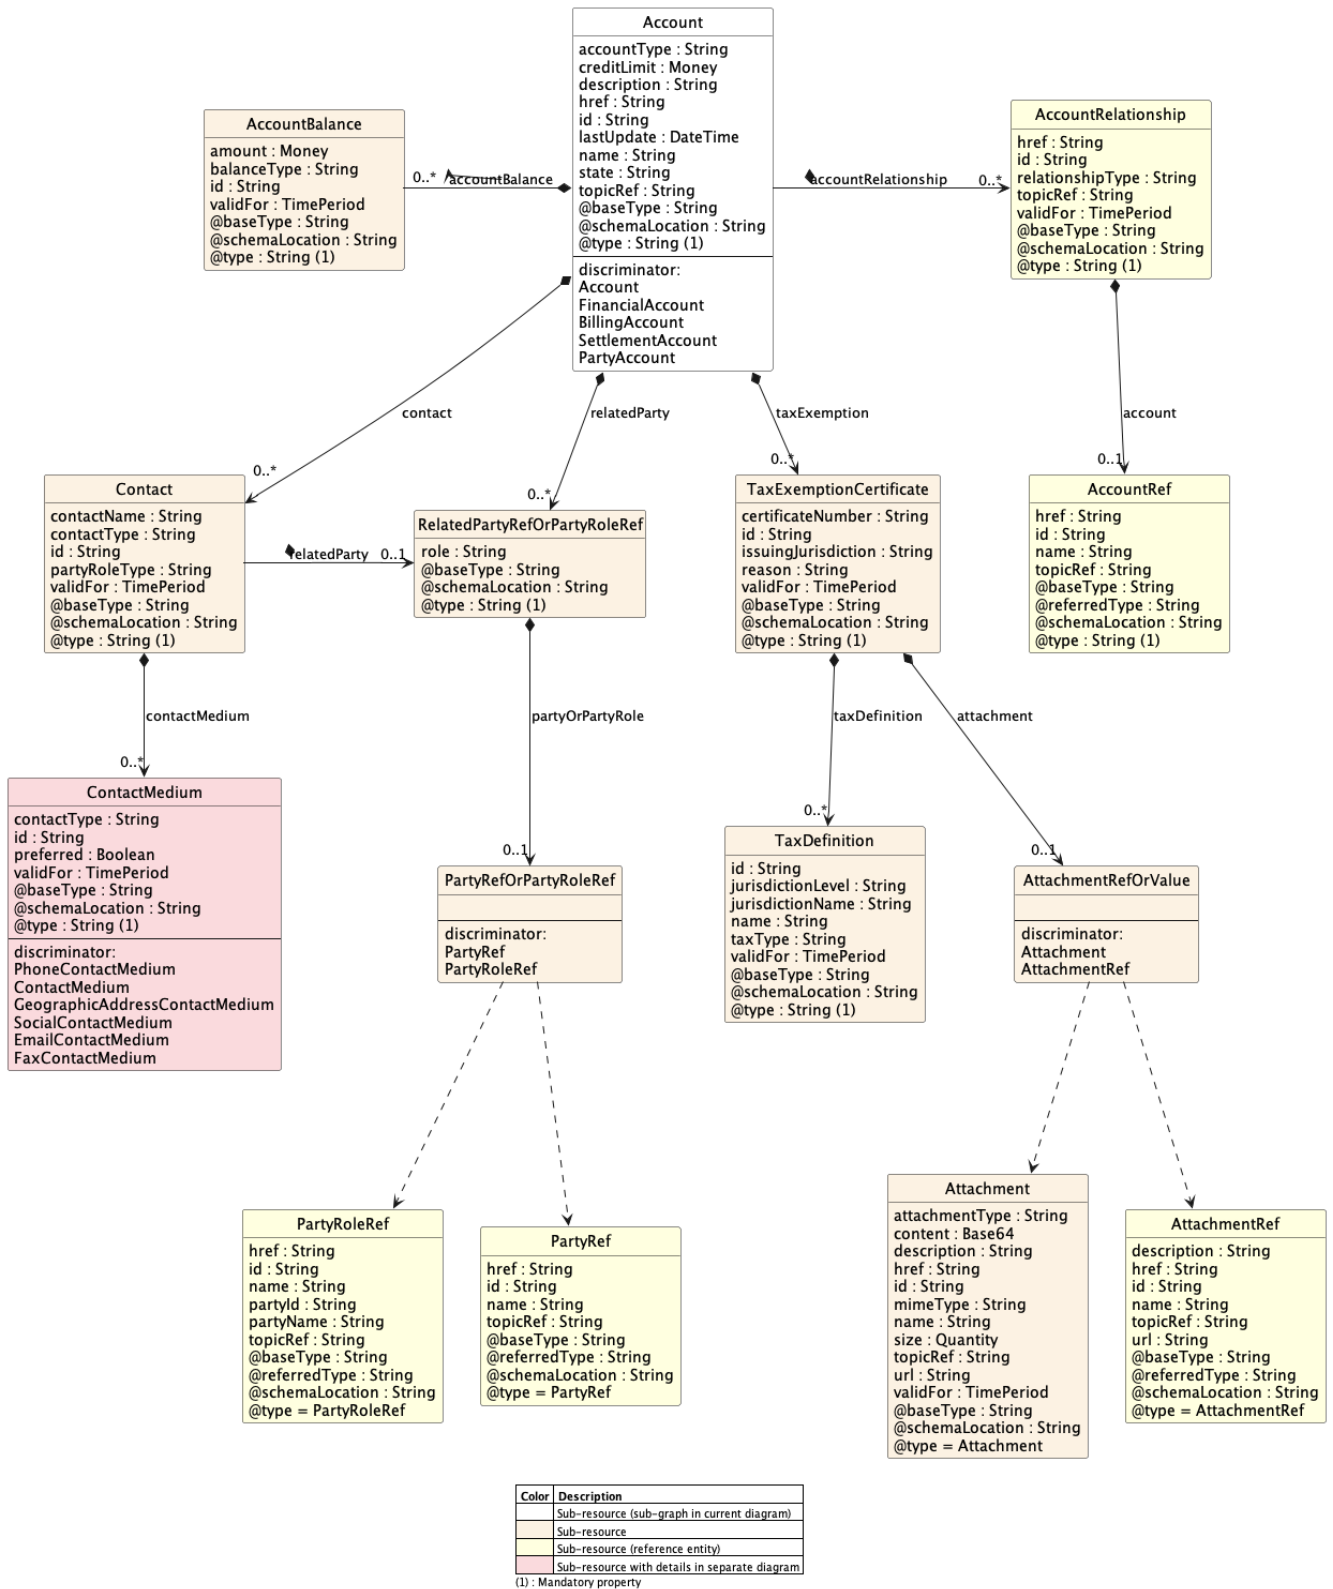

Figure 11 - Account

## Field descriptions

### SettlementAccount fields

@type	A String. When sub-classing, this defines the sub-class Extensible name.
-------	--

### Account sub-resource fields

accountBalance	An AccountBalance. Balances linked to the account.
accountRelationship	An AccountRelationship. Significant connection between accounts. For instance an aggregating account for a list of shop branches each having its own billing account.
accountType	A String. A categorization of an account, such as individual, joint, and so forth, whose instances share some of the same characteristics. Note: for flexibility we use a String here but an implementation may use an enumeration with a limited list of valid values.
contact	A Contact. An individual or an organization used as a contact point for a given account and accessed via some contact medium.
creditLimit	A Money. A base / value business entity used to represent money.
description	A String. Detailed description of the account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. The date and time that the account was last updated.
name	A String. Name of the account.
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
state	A String. Contains the lifecycle state such as: Active, Closed, Suspended and so on.
taxExemption	A TaxExemptionCertificate. A tax exemption certificate represents a tax exemption granted to a party (individual or organization) by a tax jurisdiction which may be a city, state, country,... An exemption has a certificate identifier (received from the jurisdiction that levied the tax) and a validity period. An exemption is per tax types and determines for each type of tax what portion of the tax is exempted (partial by percentage or complete) via the tax definition.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AccountBalance sub-resource fields

amount	A Money. A base / value business entity used to represent money.
balanceType	A String. Type of the balance : deposit balance, disputed balance, loyalty balance, receivable balance...
id	A String. Identifier of the balance within list of the balances (for entities with list).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AccountRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### AccountRelationship sub-resource fields

account	An AccountRef. Account reference. A account may be a party account or a financial account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
relationshipType	A String. Type of relationship.
topicRef	A String. A reference to the topic from which this entity can be fetched.

validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### Attachment sub-resource fields

attachmentType	A String. A business characterization of the purpose of the attachment, for example logo, instructionManual, contractCopy.
content	A Base64. The actual contents of the attachment object, if embedded, encoded as base64.
description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
contentType	A String. A technical characterization of the attachment content format using IETF Mime Types.
name	A String. The name of the attachment.
size	A Quantity. An amount in a given unit.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Uniform Resource Locator, is a web page address (a subset of URI).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### AttachmentRef sub-resource fields

description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.

name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
url	A String. Link to the attachment media/content.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillFormat sub-resource fields

description	A String. An explanatory text for this bill format.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillFormatRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillPresentationMedia sub-resource fields

description	A String. An explanatory text describing this bill presentation media.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillPresentationMediaRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillStructure sub-resource fields

cycleSpecification	A BillingCycleSpecificationRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillingCycleSpecification entity and not the BillingCycleSpecificationRefOrValue class itself.
format	A BillFormatRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillFormat entity and not the BillFormatRefOrValue class itself.

presentationMedia	A BillPresentationMediaRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the BillPresentationMedia entity and not the BillPresentationMediaRefOrValue class itself.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### BillingCycleSpecification sub-resource fields

billingDateShift	An Integer. An offset of a billing/settlement date. The offset is expressed as number of days with regard to the start of the billing/settlement period.
billingPeriod	A String. A billing time period. It can be recurring, for example: week, month, quarter of year, year .
chargeDateOffset	An Integer. An offset of a date through which charges previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.
creditDateOffset	An Integer. An offset of a date through which credits previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.
description	A String. An explanation regarding this billing cycle specification.
frequency	A String. Frequency of the billing cycle (monthly for instance).
href	A String. Hyperlink reference.
id	A String. Unique identifier.
mailingDateOffset	An Integer. An offset of a customer bill mailing date. The offset is expressed as number of days with regard to the start of the BillingPeriod.
name	A String. A short descriptive name.
paymentDueDateOffset	An Integer. An offset of a payment due date. The offset is expressed as number of days with regard to the start of the BillingPeriod.
topicRef	A String. A reference to the topic from which this entity can be fetched.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.

@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **BillingCycleSpecificationRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **Contact sub-resource fields**

contactMedium	A ContactMedium. Indicates the contact medium that could be used to contact the party. This is an abstract base class, the actual value is in one of the strongly-typed subclasses : EmailContactMedium, FaxContactMedium, PhoneContactMedium, GeographicAddressContactMedium, SocialMediaContactMedium...
contactName	A String. A displayable name for that contact.
contactType	A String. Type of contact (primary, secondary...).
id	A String. Identifier of the contact within list of the contacts (for entities with list).
partyRoleType	A String. Identifies what kind of party role type is linked to the contact (a account manager...).
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### ContactMedium sub-resource fields

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### EmailContactMedium sub-resource fields

emailAddress	A String. Full email address in standard format.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### FaxContactMedium sub-resource fields

faxNumber	A String. The fax number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### FinancialAccountRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.

@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **GeographicAddressContactMedium sub-resource fields**

city	A String. The city.
country	A String. The country.
geographicAddress	A GeographicAddressRef. Reference to a Geographic Address.
postCode	A String. Postcode.
stateOrProvince	A String. State or province.
street1	A String. Describes the street.
street2	A String. Complementary street description.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **GeographicAddressRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### **PartyAccount sub-resource fields**

billStructure	A BillStructure. The structure of the bill for party accounts (billing or settlement).
defaultPaymentMethod	A PaymentMethodRef. PaymentMethod reference. A payment method defines a specific mean of payment (e.g direct debit).

financialAccount	A FinancialAccountRef. AccountReceivable reference. An account of money owed by a party to another entity in exchange for goods or services that have been delivered or used. An account receivable aggregates the amounts of one or more party accounts (billing or settlement) owned by a given party.
paymentPlan	A PaymentPlan. Defines a plan for payment (when a party wants to spread his payments).
paymentStatus	A String. The condition of the account, such as due, paid, in arrears.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### PartyRoleRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
partyId	A String. The identifier of the engaged party that is linked to the PartyRole object.
partyName	A String. The name of the engaged party that is linked to the PartyRole object.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.

@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **PaymentMethodRef sub-resource fields**

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### **PaymentPlan sub-resource fields**

id	A String. Identifier of the plan within list of the plans (for entities with list).
numberOfPayments	An Integer. Number of payments used to spread the global payment.
paymentFrequency	A String. Frequency of the payments, such as monthly and bimonthly.
paymentMethod	A PaymentMethodRef. PaymentMethod reference. A payment method defines a specific mean of payment (e.g direct debit).
planType	A String. Type of payment plan.
priority	An Integer. Priority of the payment plan.
status	A String. Status of the payment plan (effective, ineffective).
totalAmount	A Money. A base / value business entity used to represent money.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### PhoneContactMedium sub-resource fields

phoneNumber	A String. The phone number of the contact.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### RelatedPartyRefOrPartyRoleRef sub-resource fields

partyOrPartyRole	A PartyRefOrPartyRoleRef.
role	A String. Role played by the related party or party role in the context of the specific entity it is linked to. Such as 'initiator', 'customer', 'salesAgent', 'user'.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### SocialContactMedium sub-resource fields

socialNetworkId	A String. Identifier as a member of a social network.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

#### TaxDefinition sub-resource fields

id	A String. Unique identifier of the tax.
jurisdictionLevel	A String. Level of the jurisdiction that levies the tax.
jurisdictionName	A String. Name of the jurisdiction that levies the tax.
name	A String. Tax name.
taxType	A String. Type of the tax.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.

@type	A String. When sub-classing, this defines the sub-class Extensible name.
-------	--

### TaxExemptionCertificate sub-resource fields

attachment	An AttachmentRefOrValue. The polymorphic attributes @type, @schemaLocation & @referredType are related to the Attachment entity and not the AttachmentRefOrValue class itself.
certificateNumber	A String. Identifier of a document that shows proof of exemption from taxes for the taxing jurisdiction.
id	A String. Identifier of the tax exemption within list of the exemptions.
issuingJurisdiction	A String. Name of the jurisdiction that issued the exemption.
reason	A String. Reason for the tax exemption.
taxDefinition	A TaxDefinition. Reference of a tax definition. A tax is levied by an authorized tax jurisdiction. For example, there are many different types of tax (Federal Tax levied by the US Government, State Tax levied by the State of California, City Tax levied by the City of Los Angeles, etc.).
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Json representation sample(s)

We provide below a JSON representation as example of the 'SettlementAccount' resource object.

```

## BillPresentationMedia resource

A mean of communicating a bill, supported by the associated bill format. For example, post mail, email, web page.

### Resource model

BillPresentationMedia
<b>description</b> : String <b>href</b> : String <b>id</b> : String <b>name</b> : String <b>topicRef</b> : String <b>@baseType</b> : String <b>@schemaLocation</b> : String <b>@type</b> = BillPresentationMedia

(1) : Mandatory property

Figure 12 - BillPresentationMedia

## Field descriptions

### BillPresentationMedia fields

description	A String. An explanatory text describing this bill presentation media.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. A short descriptive name.
topicRef	A String. A reference to the topic from which this entity can be fetched.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Json representation sample(s)

We provide below a JSON representation as example of the 'BillPresentationMedia' resource object.

```
{
  "@type" : "BillPresentationMedia",
  "description" : "This bill presentation media describes electronic media",
  "href" : "https://host:port/tmf-
api/accountManagement/v5/billPresentationMedia/4506",
  "id" : "4506",
  "name" : "Electronic",
  "topicRef" :
"kafka://host/{prefix}.accountManagement.v5.retrieveBillPresentationMedia.commandReque
st"
}
```

## BillingCycleSpecification resource

A detailed description of when to initiate a billing cycle and the various sub steps of a billing cycle.

### Resource model

BillingCycleSpecification
<b>billingDateShift</b> : Integer <b>billingPeriod</b> : String <b>chargeDateOffset</b> : Integer <b>creditDateOffset</b> : Integer <b>description</b> : String <b>frequency</b> : String <b>href</b> : String <b>id</b> : String <b>mailingDateOffset</b> : Integer <b>name</b> : String <b>paymentDueDateOffset</b> : Integer <b>topicRef</b> : String <b>validFor</b> : TimePeriod <b>@baseType</b> : String <b>@schemaLocation</b> : String <b>@type</b> = BillingCycleSpecification

(1) : Mandatory property

Figure 13 - BillingCycleSpecification

## Field descriptions

### BillingCycleSpecification fields

billingDateShift	An Integer. An offset of a billing/settlement date. The offset is expressed as number of days with regard to the start of the billing/settlement period.
billingPeriod	A String. A billing time period. It can be recurring, for example: week, month, quarter of year, year .
chargeDateOffset	An Integer. An offset of a date through which charges previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.
creditDateOffset	An Integer. An offset of a date through which credits previously received by the billing system will appear on the bill. The offset is expressed as number of days with regard to the start of the BillingPeriod.
description	A String. An explanation regarding this billing cycle specification.
frequency	A String. Frequency of the billing cycle (monthly for instance).
href	A String. Hyperlink reference.
id	A String. Unique identifier.
mailingDateOffset	An Integer. An offset of a customer bill mailing date. The offset is expressed as number of days with regard to the start of the BillingPeriod.

name	A String. A short descriptive name.
paymentDueDateOffset	An Integer. An offset of a payment due date. The offset is expressed as number of days with regard to the start of the BillingPeriod.
topicRef	A String. A reference to the topic from which this entity can be fetched.
validFor	A TimePeriod. A period of time, either as a deadline (endTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

### Json representation sample(s)

We provide below a JSON representation as example of the 'BillingCycleSpecification' resource object.

```
{
  "@type" : "BillingCycleSpecification",
  "billi" : 20,
  "chargeDateOffset" : 5,
  "creditDateOffset" : 5,
  "description" : "This billing cycle specification specifies cycle 5th of month",
  "frequency" : "monthly",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billingCycleSpecification/4556",
  "id" : "4556",
  "mailingDateOffset" : 25,
  "name" : "Monthly billing",
  "paymentDueDateOffset" : 30,
  "validFor" : {
    "startDateTime" : "2018-06-10T00:00:00.000Z",
    "endDateTime" : "2019-01-10T00:00:00.000Z"
  },
  "topicRef" :
  "kafka://host/{prefix}.accountManagement.v5.retrieveBillingCycleSpecification.commandRequest"
}
```

## Notification Resource Models

28 notifications are defined for this API.

Notifications related to BillFormat:

- Bill Format Create Event
- Bill Format Delete Event
- Bill Format Attribute Value Change Event
- Bill Format State Change Event

Notifications related to PartyAccount:

- Party Account Create Event
- Party Account Delete Event
- Party Account Attribute Value Change Event
- Party Account State Change Event

Notifications related to BillingAccount:

- Billing Account Create Event
- Billing Account Delete Event
- Billing Account Attribute Value Change Event
- Billing Account State Change Event

Notifications related to FinancialAccount:

- Financial Account Create Event
- Financial Account Delete Event
- Financial Account Attribute Value Change Event
- Financial Account State Change Event

Notifications related to SettlementAccount:

- Settlement Account Create Event
- Settlement Account Delete Event
- Settlement Account Attribute Value Change Event
- Settlement Account State Change Event

Notifications related to BillPresentationMedia:

- Bill Presentation Media Create Event
- Bill Presentation Media Delete Event
- Bill Presentation Media Attribute Value Change Event
- Bill Presentation Media State Change Event

Notifications related to BillingCycleSpecification:

- Billing Cycle Specification Create Event

- Billing Cycle Specification Delete Event
- Billing Cycle Specification Attribute Value Change Event
- Billing Cycle Specification State Change Event

The notification structure for all notifications in this API follow the pattern depicted by the figure below. A notification event resource (depicted by "SpecificEvent" placeholder) is a sub class of a generic Event structure containing at least an id of the event occurrence (eventId), an event timestamp (eventTime), and the name of the resource (eventType). This notification structure owns an event payload structure ("SpecificEventPayload" placeholder) linked to the resource concerned by the notification using the resource name as access field ("resourceName" placeholder).

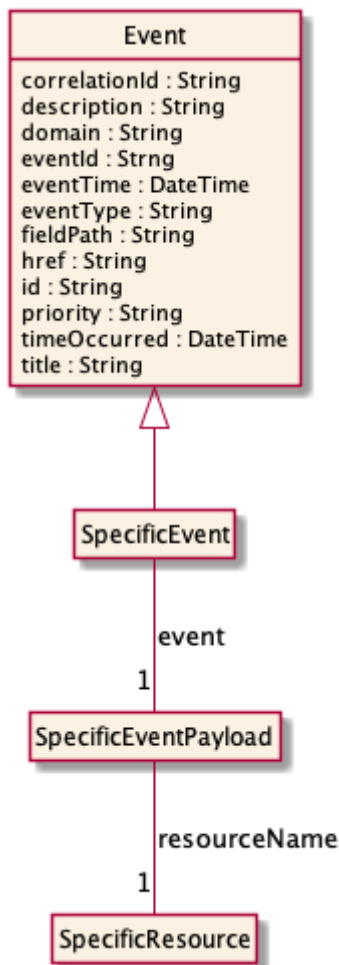

Figure 14 Notification Pattern

# API OPERATIONS

Every operation consists of two parts:

- **REQUEST:** Publish a message on a 'commandRequest' channel.
- **RESPONSE:** Subscribe to the corresponding 'commandReply' channel to receive the response.

Remember the following Async Uniform Contract:

Operation on Entities	Uniform Async API Operation	Description
Query One Entity	retrieveResource	retrieve must be used to retrieve a representation of a resource.
Query Entities	listResource	list must be used to retrieve a list of resources.
Create Entity	createResource	create must be used to create a new resource
Partial Update of an Entity	patchResource	patch must be used to partially update a resource
Remove an Entity	deleteResource	delete must be used to remove a resource

Filtering and attribute selection rules are described in the TMF Async Design Guidelines.

Notifications are also described in a subsequent section.

## Operations on PartyAccount

### Retrieves a PartyAccount by ID

Request topic: {prefix}.accountManagement.v5.retrievePartyAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.retrievePartyAccount.commandReply

#### Description

This operation retrieves a PartyAccount entity. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

#### Usage samples

##### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.retrievePartyAccount.commandReply
```

```
Parameters: {
  "id": 4458
}
```

## Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.retrievePartyAccount.commandRequest
```

## List or find PartyAccount objects

Request topic: {prefix}.accountManagement.v5.listPartyAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.listPartyAccount.commandReply

### Description

This operation list PartyAccount entities. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

### Usage samples

Here is an example of a request for retrieving PartyAccount resources. Retrieving all party accounts of type Business with due status. The result items are shrunk to show only the id, name and the credit limit (fields=id,name,creditLimit).

### Request Headers

```

X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.listPartyAccount.commandReply

```

### Request message header

```

```

## Creates a PartyAccount

Request topic: {prefix}.accountManagement.v5.createPartyAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.createPartyAccount.commandReply

### Description

This operation creates a PartyAccount entity.

### Mandatory Attributes

Mandatory Attributes	Rule
name	
relatedParty	

### Usage samples

Here is a sample of a request for creating an PartyAccount resource. In this example the request only passes mandatory attributes.

### Request Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
```

Reply-Channel: {prefix}.accountManagement.v5.createPartyAccount.commandReply

## Request Payload

```
{
  "@type" : "PartyAccount",
  "name" : "Travel account",
  "relatedParty" : [ {
    "@type" : "RelatedPartyRefOrPartyRoleRef",
    "role" : "owner",

}
```

## Updates partially a PartyAccount

Request topic: {prefix}.accountManagement.v5.patchPartyAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.patchPartyAccount.commandReply

### Description

This operation allows partial updates of a PartyAccount entity. Support of json/merge (<https://tools.ietf.org/html/rfc7386>) is mandatory, support of json/patch (<http://tools.ietf.org/html/rfc5789>) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the createPartyAccount operation applies to the patchPartyAccount operation. Hence these tables are not repeated here.

### Patchable and Non Patchable Attributes

Non Patchable Attributes	Rule
@baseType	
@schemaLocation	
@type	
href	
id	
lastUpdate	

Patchable Attributes	Rule
accountBalance	
accountRelationship	
accountType	
billStructure	
contact	
creditLimit	
defaultPaymentMethod	
description	
financialAccount	
name	
paymentPlan	

Patchable Attributes	Rule
paymentStatus	
relatedParty	
state	
taxExemption	

### Usage samples

Here is an example of a request for patching an PartyAccount resource with change on credit limit attribute using patch merge

This example uses the PatchPartyAccountJsonRequest request message (used for a payload of type application/json).

### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchPartyAccount.commandReply
Parameters: {
  "id": 4458
}
```

### Request Payload

```
{
  "@type" : "PartyAccount",
  "creditLimit" : {
    "unit" : "USD",
    "value" : 5000
  }
}
```

### Response Headers

## List or find BillingAccount objects

Request topic: {prefix}.accountManagement.v5.listBillingAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.listBillingAccount.commandReply

## Description

This operation list BillingAccount entities. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

## Usage samples

Here is an example of a request for retrieving BillingAccount resources. List all suspended billing accounts. The result items are shrunk to show only the id and name (fields=id,name).

## Request Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.listBillingAccount.commandReply
```

## Request message header

```
{
  "Parameters": {
    "filtering": "state=Suspended"
  }
}
```

## Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.listBillingAccount.commandRequest
```

## Response Payload

```
[ {
  "@type" : "BillingAccount",
  "id" : "42",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billingAccount/42",
  "name" : "Lakes Agency Account",
  "topicRef" :
"kafka://host/{prefix}.accountManagement.v5.retrieveBillingAccount.commandRequest"
}, {
  "@type" : "BillingAccount",

  "href" : "https://host:port/tmf-api/accountManagement/v5/billingAccount/43",
  "name" : "Santa Claus Donate Account",
  "topicRef" :
"kafka://host/{prefix}.accountManagement.v5.retrieveBillingAccount.commandRequest"
} ]
```

## Creates a BillingAccount

Request topic: {prefix}.accountManagement.v5.createBillingAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.createBillingAccount.commandReply

### Description

This operation creates a BillingAccount entity.

### Mandatory Attributes

Mandatory Attributes	Rule
name	
relatedParty	

### Usage samples

Here is an example of a request for creating a specific BillingAccount. In this example the request only passes mandatory attributes.

### Request Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.createBillingAccount.commandReply
```

### Request Payload

```
{
  "@type" : "BillingAccount",
  "name" : "Home Account",
  "relatedParty" : [ {
    "role" : "service provider",
    "@type" : "RelatedPartyRefOrRelatedPartyRoleRef",
    "partyOrPartyRole" : {

      "topicRef" :
        "kafka://host/{prefix}.partyManagement.v5.retrieveOrganization.commandRequest"
    }
  } ],
  "topicRef" :
    "kafka://host/{prefix}.accountManagement.v5.retrieveBillingAccount.commandRequest"
}
```

## Updates partially a BillingAccount

Request topic: {prefix}.accountManagement.v5.patchBillingAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.patchBillingAccount.commandReply

### Description

This operation allows partial updates of a BillingAccount entity. Support of json/merge (<https://tools.ietf.org/html/rfc7386>) is mandatory, support of json/patch (<http://tools.ietf.org/html/rfc5789>) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the createBillingAccount operation applies to the patchBillingAccount operation. Hence these tables are not repeated here.

### Patchable and Non Patchable Attributes

Non Patchable Attributes	Rule
@baseType	

Non Patchable Attributes	Rule
@schemaLocation	
@type	
href	
id	
lastUpdate	

Patchable Attributes	Rule
accountBalance	
accountRelationship	
accountType	
billStructure	
contact	
creditLimit	
defaultPaymentMethod	
description	
financialAccount	
name	
paymentPlan	
paymentStatus	
ratingType	
relatedParty	
state	
taxExemption	

### Usage samples

Here is an example of a request for patching a BillingAccount. In this example, the name is modified, using JSON Patch

This example uses the PatchBillingAccountJsonPatchRequest request message (used for a payload of type application/json-patch+json).

### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandReply
Parameters: {
  "id": 5430
}
```

```
}
```

## Request Payload

```
{
  "path" : "/name",
  "value" : "Richard Cole Account",
  "op" : "replace"
}
```

## Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandRequest
```

## Response Payload

```
{
  "@type" : "BillingAccount",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billingAccount/5430",
  "id" : "5430",
  "name" : "Richard Cole Account",
  "relatedParty" : [ {
    "role" : "service provider",
    "@type" : "RelatedPartyRefOrPartyRoleRef",
    "partyOrPartyRole" : {
      "@type" : "PartyRefOrPartyRoleRef",
      "@referredType" : "Organization",
      "id" : "6838",
      "href" : "https://host:port/tmf-api/partyManagement/v5/organization/6838",
      "name" : "Richard Cole",
      "topicRef" :
        "kafka://host/{prefix}.partyManagement.v5.retrieveOrganization.commandRequest"
    }
  } ],
  "topicRef" :
    "kafka://host/{prefix}.accountManagement.v5.retrieveBillingAccount.commandRequest"
}
```

Here is an example of a request for patching a BillingAccount. In this example, the contact is promoted from secondary to primary, using JSON Patch Query

This example uses the PatchBillingAccountPatchQueryRequest request message (used for a payload of type application/json-patch-query+json).

## Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandReply
Parameters: {
  "id": 5430
}
```

### Request Payload

```
{
  "path" : "/contact/contactType?/contact.contactName=Rachel Douglas",
  "value" : "primary",
  "op" : "replace"
}
```

### Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandRequest
```

### Response Payload

```
{
  "@type" : "BillingAccount",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billingAccount/5430",
  "id" : "5430",
  "name" : "Richard Cole Account",
  "contact" : [ {
    "@type" : "Contact",
    "contactName" : "Rachel Douglas",
    "contactType" : "primary"
  } ],
  "topicRef" :
  "kafka://host/{prefix}.accountManagement.v5.retrieveBillingAccount.commandRequest"
}
```

Here is an example of a request for patching a BillingAccount. In this example, the name is modified, using Patch Merge

This example uses the PatchBillingAccountJsonRequest request message (used for a payload of type application/json).

### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandReply
```

```
Parameters: {
  "id": 5430
}
```

## Request Payload

```
{
  "@type" : "BillingAccount",
  "name" : "Richard Cole Account"
}
```

## Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandRequest
```

## Response Payload

```
{
  "@type" : "BillingAccount",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billingAccount/5430",
  "id" : "5430",
  "name" : "Richard Cole Account",
  "relatedParty" : [ {
    "role" : "service provider",
    "@type" : "RelatedPartyRefOrPartyRoleRef",
    "partyOrPartyRole" : {
      "@type" : "PartyRefOrPartyRoleRef",
      "@referredType" : "Organization",
      "id" : "6838",
      "href" : "https://host:port/tmf-api/partyManagement/v5/organization/6838",
      "name" : "Richard Cole",
      "topicRef" :
        "kafka://host/{prefix}.partyManagement.v5.retrieveOrganization.commandRequest"
    }
  } ],
  "topicRef" :
    "kafka://host/{prefix}.accountManagement.v5.retrieveBillingAccount.commandRequest"
}
```

Here is an example of a request for patching a `BillingAccount`. In this example, the name is modified, using Patch Merge

This example uses the `PatchBillingAccountMergePatchRequest` request message (used for a payload of type `application/merge-patch+json`).

## Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandReply
Parameters: {
  "id": 5430
}
```

## Request Payload

```
{
  "@type" : "BillingAccount",
  "name" : "Richard Cole Account"
}
```

## Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.patchBillingAccount.commandRequest
```

## Response Payload

```
{
  "@type" : "BillingAccount",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billingAccount/5430",
  "id" : "5430",

        "kafka://host/{prefix}.partyManagement.v5.retrieveOrganization.commandRequest"
    }
  } ],
  "topicRef" :
    "kafka://host/{prefix}.accountManagement.v5.retrieveBillingAccount.commandRequest"
}
```

## Deletes a BillingAccount

Request topic: {prefix}.accountManagement.v5.deleteBillingAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.deleteBillingAccount.commandReply

### Description

This operation deletes a BillingAccount entity.

### Usage samples

This operation deletes a BillingAccount resource.

### Request

```
DELETE /billingaccount/5430
```

### Response

```
204
```

## Operations on SettlementAccount

### Retrieves a SettlementAccount by ID

Request topic: {prefix}.accountManagement.v5.retrieveSettlementAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.retrieveSettlementAccount.commandReply

### Description

This operation retrieves a SettlementAccount entity. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

### Usage samples

#### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.retrieveSettlementAccount.commandReply
Parameters: {
  "id": 8790
}
```

### Response Headers

## List or find SettlementAccount objects

Request topic: {prefix}.accountManagement.v5.listSettlementAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.listSettlementAccount.commandReply

### Description

This operation list SettlementAccount entities. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

### Usage samples

Here is an example of a request for retrieving SettlementAccount resources. List all settlement accounts connected to a given party account. The result items are shrunk to show only the id and name (fields=id,name).

### Request Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169  
Reply-Channel: {prefix}.accountManagement.v5.listSettlementAccount.commandReply
```

### Request message header

```
{  
  "Parameters": {  
    "filtering": "partyAccount.id=7876543"  
  }  
}
```

### Response Headers

  } ]

```

## Creates a SettlementAccount

Request topic: {prefix}.accountManagement.v5.createSettlementAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.createSettlementAccount.commandReply

### Description

This operation creates a SettlementAccount entity.

### Mandatory Attributes

Mandatory Attributes	Rule
name	
relatedParty	

### Usage samples

Here is an example of a request for creating a specific SettlementAccount. In this example the request only passes mandatory attributes.

### Request Headers

```

X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.createSettlementAccount.commandReply

```

### Request Payload

}

```

## Updates partially a SettlementAccount

Request topic: {prefix}.accountManagement.v5.patchSettlementAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.patchSettlementAccount.commandReply

## Description

This operation allows partial updates of a SettlementAccount entity. Support of json/merge (<https://tools.ietf.org/html/rfc7386>) is mandatory, support of json/patch (<http://tools.ietf.org/html/rfc5789>) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the createSettlementAccount operation applies to the patchSettlementAccount operation. Hence these tables are not repeated here.

### Patchable and Non Patchable Attributes

Non Patchable Attributes	Rule

Here is an example of a request for patching a SettlementAccount. In this example, credit limit and payment status are updated, using Patch Merge

This example uses the PatchSettlementAccountJsonRequest request message (used for a payload of type application/json).

### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchSettlementAccount.commandReply
Parameters: {
  "id": 8790
}
```

### Request Payload

```
{
  "@type" : "SettlementAccount",
  "paymentStatus" : "Normal",
  "creditLimit" : {
    "unit" : "USD",
    "value" : 25000
  }
}
```

### Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.patchSettlementAccount.commandRequest
```

### Response Payload

```

## Deletes a SettlementAccount

Request topic: {prefix}.accountManagement.v5.deleteSettlementAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.deleteSettlementAccount.commandReply

### Description

This operation deletes a SettlementAccount entity.

### Usage samples

This operation deletes a SettlementAccount resource.

### Request

```
DELETE /settlementaccount/8790
```

### Response

```
204
```

## Operations on FinancialAccount

### Retrieves a FinancialAccount by ID

Request topic: {prefix}.accountManagement.v5.retrieveFinancialAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.retrieveFinancialAccount.commandReply

### Description

This operation retrieves a FinancialAccount entity. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

### Usage samples

```

## List or find FinancialAccount objects

Request topic: {prefix}.accountManagement.v5.listFinancialAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.listFinancialAccount.commandReply

### Description

This operation list FinancialAccount entities. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

### Usage samples

Here is an example of a request for retrieving multiple FinancialAccounts.

### Request Headers

## Creates a FinancialAccount

Request topic: {prefix}.accountManagement.v5.createFinancialAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.createFinancialAccount.commandReply

### Description

This operation creates a FinancialAccount entity.

### Mandatory Attributes

Mandatory Attributes	Rule
name	
relatedParty	

### Usage samples

Here is an example of a request for creating a specific FinancialAccount. In this example the request only passes mandatory attributes.

### Request Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.createFinancialAccount.commandReply
```

### Request Payload

```
{
  "@type" : "FinancialAccount",
  "name" : "Administration account",
  "relatedParty" : [ {
    "role" : "employee",
    "@type" : "RelatedPartyRefOrPartyRoleRef",
    "partyOrPartyRole" : {
      "@referredType" : "Individual",
      "@type" : "PartyRefOrPartyRoleRef",
      "href" : "https://host:port/tmf-api/partyManagement/v5/individual/2186",
      "id" : "2186",
      "name" : "Gustave Flaubert",
      "topicRef" :
        "kafka://host/{prefix}.partyManagement.v5.retrieveIndividual.commandRequest"
    }
  } ]
}
```

### Response Headers

Status-Code: 201
X-Request-Channel: {prefix}.accountManagement.v5.createFinancialAccount.commandRequest
```

### Response Payload

```
{
  "@type" : "FinancialAccount",
  "href" : "https://host:port/tmf-api/accountManagement/v5/financialAccount/1041",
  "id" : "1041",
  "lastModified" : "2018-06-14T00:00:00.000Z",
  "name" : "Administration account",
  "topicRef" :
    "kafka://host/{prefix}.accountManagement.v5.retrieveFinancialAccount.commandRequest"
}
```

## Updates partially a FinancialAccount

Request topic: {prefix}.accountManagement.v5.patchFinancialAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.patchFinancialAccount.commandReply

### Description

This operation allows partial updates of a FinancialAccount entity. Support of json/merge (<https://tools.ietf.org/html/rfc7386>) is mandatory, support of json/patch (<http://tools.ietf.org/html/rfc5789>) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the createFinancialAccount operation applies to the patchFinancialAccount operation. Hence these tables are not repeated here.

### Patchable and Non Patchable Attributes

Non Patchable Attributes	Rule
@baseType	
@schemaLocation	
@type	
href	
id	
lastUpdate	

Patchable Attributes	Rule
accountBalance	
accountRelationship	
accountType	
contact	
creditLimit	
description	
name	
relatedParty	
state	
taxExemption	

### Usage samples

Here is an example of a request for patching a FinancialAccount. In this example, the name attribute is set, using Patch Merge

This example uses the PatchFinancialAccountMergePatchRequest request message (used for a

payload of type application/merge-patch+json).

### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchFinancialAccount.commandReply
Parameters: {
  "id": 1041
}
```

### Request Payload

```
{
  "@type" : "FinancialAccount",
  "name" : "Consolidation Account"
}
```

### Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.patchFinancialAccount.commandRequest
```

Here is an example of a request for patching a FinancialAccount, by removing an account relationship using json-patch query

This example uses the PatchFinancialAccountPatchQueryRequest request message (used for a payload of type application/json-patch-query+json).

### Request message header

```

X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchFinancialAccount.commandReply
Parameters: {
  "id": 1041
}

```

### Request Payload

```

[ {
  "op" : "remove",

```

```
"path" : "/accountRelationship?/accountRelationship.account.id=7688"  
} ]
```

## Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169  
Status-Code: 200  
X-Request-Channel: {prefix}.accountManagement.v5.patchFinancialAccount.commandRequest
```

## Response Payload

```
{

## Deletes a FinancialAccount

Request topic: {prefix}.accountManagement.v5.deleteFinancialAccount.commandRequest

Reply topic: {prefix}.accountManagement.v5.deleteFinancialAccount.commandReply

### Description

This operation deletes a FinancialAccount entity.

### Usage samples

This operation deletes a FinancialAccount resource.

### Request

```
DELETE /financialaccount/1041
```

### Response

## Operations on BillFormat

### Retrieves a BillFormat by ID

Request topic: {prefix}.accountManagement.v5.retrieveBillFormat.commandRequest

Reply topic: {prefix}.accountManagement.v5.retrieveBillFormat.commandReply

#### Description

This operation retrieves a BillFormat entity. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

#### Usage samples

##### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.retrieveBillFormat.commandReply
Parameters: {
  "id": 8718
}
```

##### Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.retrieveBillFormat.commandRequest
```

##### Response Payload

```
{
  "@type" : "BillFormat",
  "description" : "This bill format gives a detailed invoice",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billFormat/8718",
  "id" : "8718",
  "name" : "Detailed invoice",
  "topicRef" :
"kafka://host/{prefix}.accountManagement.v5.retrieveBillFormat.commandRequest"
}
```

## List or find BillFormat objects

Request topic: {prefix}.accountManagement.v5.listBillFormat.commandRequest

Reply topic: {prefix}.accountManagement.v5.listBillFormat.commandReply

### Description

This operation list BillFormat entities. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

### Usage samples

Retrieving all bill formats. The result items are shrunk to show only the id and name (fields=id,name).

### Request Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.listBillFormat.commandReply
```

### Request message header

```
{
  "Parameters": {
    "fields": "id,name"
  }
}
```

### Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.listBillFormat.commandRequest
```

### Response Payload

```
[ {
  "@type" : "BillFormat",
  "id" : "42",
  "name" : "simple invoice"
}, {
  "@type" : "BillFormat",
  "id" : "43",
  "name" : "detailed invoice"
} ]
```

## Creates a BillFormat

Request topic: {prefix}.accountManagement.v5.createBillFormat.commandRequest

Reply topic: {prefix}.accountManagement.v5.createBillFormat.commandReply

### Description

This operation creates a BillFormat entity.

### Mandatory Attributes

Mandatory Attributes	Rule
name	

### Usage samples

Here is a sample of a request for creating a BillFormat resource. In this example the request only passes mandatory attributes.

### Request Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.createBillFormat.commandReply
```

### Request Payload

```
{
  "@type" : "BillFormat",
  "name" : "Detailed invoice"
}
```

### Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 201
X-Request-Channel: {prefix}.accountManagement.v5.createBillFormat.commandRequest
```

### Response Payload

```
{
  "@type" : "BillFormat",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billFormat/8718",
  "id" : "8718",
  "name" : "Detailed invoice",
  "topicRef" :
    "kafka://host/{prefix}.accountManagement.v5.retrieveBillFormat.commandRequest"
```

```
}
```

## Updates partially a BillFormat

Request topic: {prefix}.accountManagement.v5.patchBillFormat.commandRequest

Reply topic: {prefix}.accountManagement.v5.patchBillFormat.commandReply

### Description

This operation allows partial updates of a BillFormat entity. Support of json/merge (<https://tools.ietf.org/html/rfc7386>) is mandatory, support of json/patch (<http://tools.ietf.org/html/rfc5789>) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the createBillFormat operation applies to the patchBillFormat operation. Hence these tables are not repeated here.

### Patchable and Non Patchable Attributes

Non Patchable Attributes	Rule
@baseType	
@schemaLocation	
@type

id	

Patchable Attributes	Rule
description	
name	

### Usage samples

Here is an example of a request for patching a BillFormat resource with change on description attribute using patch merge

This example uses the PatchBillFormatMergePatchRequest request message (used for a payload of type application/merge-patch+json).

### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchBillFormat.commandReply
Parameters: {
  "id": 8718
}
```

## Request Payload

```
{
  "@type" : "BillFormat",
  "description" : "Detailed billing containing full phone numbers of calls"
}
```

## Response Headers

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Status-Code: 200
X-Request-Channel: {prefix}.accountManagement.v5.patchBillFormat.commandRequest
```

## Response Payload

```
{
  "description" : "Detailed billing containing full phone numbers of calls",
  "href" : "https://host:port/tmf-api/accountManagement/v5/billFormat/8718",
  "id" : "8718",
  "name" : "Detailed invoice",
  "topicRef" :
  "kafka://host/{prefix}.accountManagement.v5.retrieveBillFormat.commandRequest"
}
```

Here is an example of a request for patching a BillFormat resource with change on description attribute using patch merge

This example uses the PatchBillFormatMergePatchRequest request message (used for a payload of type application/merge-patch+json).

## Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel: {prefix}.accountManagement.v5.patchBillFormat.commandReply
Parameters: {
  "id": 8718
}
```

## Request Payload

```
{
  "@type" : "BillFormat",
  "description" : "Detailed billing containing full phone numbers of calls"
}
```

## Response Headers

## Updates partially a BillPresentationMedia

Request topic: {prefix}.accountManagement.v5.patchBillPresentationMedia.commandRequest

Reply topic: {prefix}.accountManagement.v5.patchBillPresentationMedia.commandReply

## Description

This operation allows partial updates of a BillPresentationMedia entity. Support of json/merge (<https://tools.ietf.org/html/rfc7386>) is mandatory, support of json/patch (<http://tools.ietf.org/html/rfc5789>) is optiona. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the createBillPresentationMedia operation applies to the patchBillPresentationMedia operation. Hence these tables are not repeated here.

}
```

## Deletes a BillPresentationMedia

Request topic: {prefix}.accountManagement.v5.deleteBillPresentationMedia.commandRequest

Reply topic: {prefix}.accountManagement.v5.deleteBillPresentationMedia.commandReply

### Description

This operation deletes a BillPresentationMedia entity.

### Usage samples

This operation deletes a BillPresentationMedia resource.

### Request

```
DELETE /billpresentationmedia/4506
```

### Response

```
204
```

## Operations on BillingCycleSpecification

### Retrieves a BillingCycleSpecification by ID

Request topic: {prefix}.accountManagement.v5.retrieveBillingCycleSpecification.commandRequest

Reply topic: {prefix}.accountManagement.v5.retrieveBillingCycleSpecification.commandReply

### Description

This operation retrieves a `BillingCycleSpecification` entity. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

## Usage samples

### Request message header

```
X-Correlation-Id: 4226B739-1DD2-4B43-A393-5E6F05CEF169
Reply-Channel:
{prefix}.accountManagement.v5.retrieveBillingCycleSpecification.commandReply
Parameters: {
  "id": 4556
}
```

### Response Headers

equest"
}
```

## Updates partially a BillingCycleSpecification

Request topic: {prefix}.accountManagement.v5.patchBillingCycleSpecification.commandRequest

Reply topic: {prefix}.accountManagement.v5.patchBillingCycleSpecification.commandReply

### Description

This operation allows partial updates of a BillingCycleSpecification entity. Support of json/merge (<https://tools.ietf.org/html/rfc7386>) is mandatory, support of json/patch (<http://tools.ietf.org/html/rfc5789>) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the createBillingCycleSpecification operation applies to the patchBillingCycleSpecification operation. Hence these tables are not repeated here.

```

# NOTIFICATIONS

Topic for BillFormat entity: {prefix}.accountManagement.v5.billFormat.notificationEvent

Topic for BillPresentationMedia entity:

{prefix}.accountManagement.v5.billPresentationMedia.notificationEvent

Topic for BillingAccount entity: {prefix}.accountManagement.v5.billingAccount.notificationEvent

Topic for BillingCycleSpecification entity:

{prefix}.accountManagement.v5.billingCycleSpecification.notificationEvent

Topic for FinancialAccount entity:

{prefix}.accountManagement.v5.financialAccount.notificationEvent

Topic for PartyAccount entity: {prefix}.accountManagement.v5.partyAccount.notificationEvent

Topic for SettlementAccount entity:

{prefix}.accountManagement.v5.settlementAccount.notificationEvent

For every single of operation on the entities use the following templates and provide sample notification message payloads.

It is assumed that consumers will subscribe to the notificationEvent channel to receive notifications, and that the server component will post notifications to that channel.

## Publish Event to listener

Here's an example of a notification received by the consumer. In this example "EVENT TYPE" should be replaced by one of the notification types supported by this API (see Notification resources Models section) and EVENT BODY refers to the data structure of the given notification type.

```
{ "event": { EVENT BODY }, "eventType": "EVENT_TYPE" }
```

For detailed examples on the general TM Forum notification mechanism, see the TMF Async Design Guidelines.
